

## **Modelling of wind resources and siting parameters**

### **Conveners:**

Julia Gottschall (Fraunhofer IWES, [julia.gottschall@iwes.fraunhofer.de](mailto:julia.gottschall@iwes.fraunhofer.de))

Javier Sanz Rodrigo (CENER, [jsrodrigo@cener.com](mailto:jsrodrigo@cener.com))

### **Description:**

Methods to predict annual energy production (AEP) and other siting parameters typically include micro- and meso-scale models, but it is still unclear how to combine those to give the predictions with the smallest uncertainty. The mini-symposium welcomes contributions dealing with the modelling of wind resources and siting parameters by combining micro- and meso-scale models.
